OUR MISSION: Drawing on the world-renowned resource for cancer and palliative care in Seattle, we aim to be the globally recognized leader in training a diverse new generation of culturally adept social work practitioners and researchers focused on health equity in oncology and palliative care services.

Our current model for care
Every day, approximately 10,000 people turn age 65 with an increasing risk for serious health problems. With an aging population, the number of people with a cancer diagnosis is expected to increase by 45 percent by the year 2030. Current cancer treatments are effective in helping about 70 percent of people with the disease live longer. However, cancer remains the leading cause of death for individuals after age 45.

In our current medical model, the focus is on technical interventions and the overarching need for social and emotional care is largely overlooked. Despite the fact that an estimated 80 percent of people would prefer to die in their own homes, 75 percent of all deaths in the United States occur in hospitals and nursing homes.

How social work is changing this model
Research shows that social care is as important as medical care when it comes to improving patients’ quality of life and their ability to tolerate and respond to treatment. Trained to focus on communication, social workers help patients identify their priorities on a continuum that ranges from active treatment to comfort care.

Poverty and discrimination are additional risk factors for illness and premature death. Social workers approach human health with a social justice lens—assessing the family, social and cultural context of the individual. As patient advocates, they work to help ensure access to high quality medical care, culturally-sensitive interventions, and family-centered support.

And when palliative care is needed, social workers are skilled at initiating and leading conversations that prepare patients for death—creating a sacred space for individuals and their families as the end of life approaches.

Center for Integrative Oncology and Palliative Care Social Work
THE CENTER FOR INTEGRATIVE ONCOLOGY AND PALLIATIVE CARE SOCIAL WORK AT THE UW SCHOOL OF SOCIAL WORK IS A NATIONAL LEADER IN EDUCATING ONCOLOGY SOCIAL WORK SCHOLARS AND PRACTITIONERS.

Established in 2018 with a substantial gift from Lynn Behar (MSW ’86, PhD ’99) and her husband Howard, the Center takes a social justice approach to oncology and palliative care that addresses disparities in cancer and end-of-life care based on race and ethnicity, disability, gender and sexual identity, geographic location, income and education.

THE CENTER HAS THREE MAJOR COMPONENTS:

Carol LaMare Endowed Fellowship in Integrative Oncology and Palliative Care Social Work
Named for Lynn Behar’s mother, who died of cancer in 2005, this fellowship program supports MSW students specializing in oncology social work as well as some undergraduate and doctoral students. Fellowship recipients receive intensive mentoring as well as practicum placements in local cancer centers.

Behar Professorship for Social Work Practice and Women’s Health
This professorship is held by a faculty member with expertise in a core field of health—especially oncology, palliative care and/or hospice care—who is a key contributor to the Center for Integrative Oncology and Palliative Care Social Work. Taryn Lindhorst, the Center’s director, currently holds this endowed professorship.

Behar Integrative Oncology and Palliative Care Social Work Endowed Research Acceleration Fund
This fund supports oncology and palliative care social work research by students and faculty and is intended to help cover expenses related to research, publication, travel, and equipment and supplies.

“‘The center envisions a world where people with cancer and those at the end of life receive the care they want from compassionate, competent and family-centered practitioners.’”
LYNN BEHAR, SCHOOL ALUMNA AND PHILANTHROPIST

HOW YOUR SUPPORT CAN MAKE AN IMPACT

Our current endowment of $2.5 million allows us to award six MSW student scholarships at $5,000 per year, fund two quarters of PhD scholarship and research on oncology and palliative care, and support other scholarly activities.

Our goal is to increase the number of specially trained BASW, MSW and PhD students able to respond to the needs of people with cancer and at the end of life in the Seattle area, Washington state and beyond.

To learn more about the center and named scholarship funding opportunities by contacting:
